ISNetworld Launches Review and Verification Services (RAVS) Department

Dallas, TX, April 4, 2006 – ISN Software Corporation (ISN) announced today that it has established a new department called Review and Verification Services (RAVS). Through RAVS, ISN offers the services of conducting desktop reviews of contractors' written safety programs using selected OSHA and operator standards as guidelines, as well as verifying contractor reported Experience Modification Rate (EMR) and safety performance statistics. Information generated by RAVS will be incorporated into ISNetworld. ISNetworld is the leading online database serving operators and contractors in the oil, gas and petrochemical industries.

Joe Eastin, Executive Vice President of ISN, said, "RAVS was formed to fill the void left when National Compliance Management Services (NCMS) announced last year that it is discontinuing its desktop health and safety review and verification service. NCMS has been an ISNetworld data partner for several years. The data provided by NCMS has become an important element of several contractors' ISNetworld information. Operators value reviewed and verified contractor Health, Safety and Environmental information as part of the contractor prequalification and monitoring process. The launching of RAVS not only complements the services currently provided through ISNetworld, but also displays ISN's commitment to offering efficient and comprehensive contractor management solutions for the industry."

Dag Yemenu, Manager of ISN's RAVS Department, added, "We have visited with over two dozen operators to discuss RAVS and the feedback has been quite positive. In addition, we have conducted numerous contractor interviews to obtain contractors' input regarding process improvement opportunities. ISN RAVS has adopted the core NCMS processes, but has introduced several improvements and new functionalities that streamline the review and verification process. Among these enhancements are features that allow contractors to submit documents electronically and monitor review results on a real-time basis. We have also supplemented our team with safety professionals that have extensive hands-on experience and regulatory knowledge."

ISN Software Corporation, through its flagship ISNetworld product, automates the relationship between contractors and their owner/operator customers in America's most capital-intensive industrial sectors. ISNetworld utilizes third party data wherever possible to create an added level of compliance record management and reporting integrity. For more information, visit www.isnsoftware.com.
