Koch Nitrogen Company Expands ISNetworld's Chemical Industry User Base

Dallas, TX, July 30, 2007 – ISN Software Corporation (ISN) announced today that Koch Nitrogen Company (Koch Nitrogen) has begun implementing ISNetworld and ISN RAVS (Review and Verification Services) across all of its domestic locations. ISNetworld is the leading online database serving operators and contractors in the oil, gas and petrochemical industries. ISN RAVS reviews and verifies certain contractor information and the results are incorporated into ISNetworld.

Joe Eastin, President of ISN, said, “From a single ammonia production facility and import terminal in the United States, Koch Nitrogen and its affiliates have become one of the world's largest producers and marketers of nitrogen fertilizers. Koch Nitrogen manufactures, markets and distributes more than 6 million metric tons of fertilizer annually. In addition to its production capacity in North America, Koch Nitrogen owns interests in plants in Venezuela, and Trinidad and Tobago, and markets much of their production. We welcome Koch Nitrogen to our expanding group of owner/operators.”

Julie Polk, Director of Business Development, added, “The addition of Koch Nitrogen further expands our footprint in the chemical industry. We look forward to working with Koch Nitrogen and the chemical industry to refine and customize ISNetworld and RAVS to meet the unique requirements of this segment.”

ISNetworld automates the relationship between contractors and their owner/operator customers in America's most capital-intensive industrial sectors. ISNetworld utilizes third party data wherever possible to create an added level of compliance record management and reporting integrity. For more information, visit www.isnetworld.com.
