ISNetworld Announces Expanded Organization

Dallas, TX, January 15, 2005 – ISN Software Corporation (ISN) announced today that it has expanded its organization to better serve its increasingly diverse customer base. The expanded organization provides for dedicated personnel to serve customers in each of the five industry segments that currently utilize ISNetworld. The five segments are: Pipeline, Onshore E&P, Refining & Chemical, Offshore E&P and Environmental.

Bill Addy, Chairman, CEO and President of ISN, said, “The ISNetworld customer base today is very different than it was a few years ago. From our roots in the pipeline industry, we have grown to have a significant presence in several areas of the oil and gas industry. Tailored execution is necessary for us to meet the demands of each customer segment.”

Joe Eastin, Executive Vice President of ISN, added, “Core ISNetworld functionalities, like the SCQ-V, insurance document management and ISNetworld ID cards, have application across most industry segments. What we are finding, though, is that there are distinctions in how ISNetworld functionality is best applied within industry segments. The expanded organization lets us better tailor ISNetworld to meet the needs of individual industry segments. Our goal is to be better partners with the operators and contractors in each of the five oil and gas industry segments we serve today.”

ISN Software Corporation, through its flagship ISNetworld product, automates the relationship between contractors and their owner/operator customers in America’s most capital-intensive industrial sectors. ISNetworld utilizes third party data wherever possible to create an added level of compliance record management and reporting integrity. For more information, visit www.isnetworld.com.
