February 22, 2011

TIORCO is a joint venture of Nalco Company and Stepan Company, formed to meet the need of energy producers worldwide for a single source provider of Enhanced Oil Recovery (EOR) technologies. TIORCO brings a comprehensive EOR approach and a long history of actual field experience to E&P companies who believe chemical EOR will be a standard production technology.

Our integrated approach to EOR provides customers with services, products and solutions.

- State-of-the-art EOR laboratory services
- Reservoir engineering and simulation
- Chemicals manufacturing and logistics
- EOR water treatment / emulsion breaking
- Specialized EOR equipment and field services
- Custom design and fabrication of upstream oil and gas surface equipment

TIORCO has been a proud member of ISNetworld since February 24, 2010. ISNetworld has allowed our company to manage our health, safety and procurement information in an easy-to-use, centralized account that helps us save time and resources.

The ISN team has assisted us with recognizing areas of improvement to help us meet our Owner Clients' requirements and to further grow our business. They are always willing to assist us, both over the phone and in person.

ISNetworld has also provided additional marketing benefits to our company. Within our ISNetworld account, we are able to showcase our company's hierarchy structure and advertise the different types of services we provide, industries we work in as well as our company specific contact information. We have had a great experience working with ISN and recommend membership to any companies wishing to further streamline their prequalification process.

Regards,

Jeanne Rohrbacher
