To Whom It May Concern,

Dipper Oilfield Developments has been a major aggregate supplier in the Conklin, Alberta area for nearly 30 years. We are experienced in road maintenance and construction, as well as the supply and service of vac trucks, graders, and portable toilets. Dipper Oilfield Developments considers safety our main priority, and maintains an impeccable safety record, which serves as a benefit to our Owner Clients. We are writing to share with you how we utilize the added-benefit tools ISNetworld provides, which has helped our company maintain a strong safety environment.

The most beneficial tool we have found within ISNetworld is the SmartLog tool. This tool allows us to manage and track our company's near miss and recordable incidents throughout the year. The information we enter is completely internal, and not for our Owner Clients to see. We are able to run customizable reports allowing us to identify our own incident criteria, which we are then able to export to Excel for our own documenting and internal purposes.

Overall, we utilize ISNetworld's SmartLog for three specific reasons:

- We are able to notice trends when entering data, and attempting to find ways to reduce incidents based on this knowledge.
- We are further able to pin-point employees with high incident frequencies, and reward employees who continually practice safety while on the job.
- We are able to depict a true image of the company's safety records, and keep track of this information in an easy-to-use, organized format.

I highly recommend the use of ISNetworld, not only to streamline all of a company's health and safety information, but for the added benefits including SmartLog. Dipper Oilfield Developments has excelled in regards to safety throughout our company's history and we will continually embrace new opportunities that come forth to improve the safety standards within our company.

Please let me know if I can be of further assistance to you.

Sincerely,

Tim Fettis
Safety Coordinator
Dipper Oilfield Developments
