Respected Industry Colleagues:

Founded in 1952, Dawson Geophysical Company is the leading provider of onshore seismic data acquisition services in the lower 48 United States as measured by the number of active crews. We acquire and process 2-D, 3-D and multi-component seismic data for a variety of clients ranging from oil and gas companies to providers of multi-client data libraries.

In 2005, Dawson Geophysical began using ISNetworld. ISNetworld has given our clients instant access to our HSSE program which has made annual client pre-qualification simple and hassle free. With the help of their excellent customer service team, uploading data and RAVS revisions have been a breeze. ISN, along with proprietary and specialized purchased software has helped Dawson stay in compliance with the International Association of Oil & Gas Producers (OGP) and has helped to expand our HSSE program.

Dawson's Health, Safety, Security and Environmental Management System is based on the seven elements of the OGP:

1. Leadership and Commitment
2. Policy and Objectives
3. Organization, Responsibilities and Resources
4. Hazards and Effects Management
5. Planning
6. Implementation and Monitoring
7. Audit and Review

Commitment to safeguarding the environment and our employees has earned Dawson several Health, Safety and Environmental awards including the 2005 BLM – Best Management Practices Award, 2008 BLM – Restore New Mexico Award, 2009 OSHA – SHARP Certification, 2010 OSHA – SHARP, and an invitation to mentor other employers into the SHARP program at the 2010 and 2011 Texas Department of Insurance Annual Health and Safety Conference. We hope to soon achieve SafeLand USA accreditation.

Our goal is that through continued efforts and achievements in HSSE we will demonstrate to our clients that Dawson Geophysical is committed to the health and safety of our employees as well as the environments in which we work.

A handwritten signature in blue ink that reads "Alan Mark Nelson". The signature is written in a cursive, flowing style.
