

To Whom It May Concern:

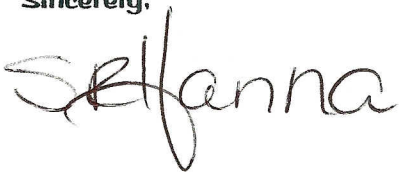

Platoon Oilfield Construction is a facility and pipeline construction and maintenance company whose goal is to provide the oil & gas industry with safety excellence and services that exceed industry expectations. We work throughout Alberta and British Columbia with offices in Hinton, AB and Dawson Creek, BC.

In 2008 Platoon Oilfield Construction joined ISNetworld at the request of many of our Owner Clients, and has found ISNetworld to be quite beneficial to our company. Some of those benefits include staying current with Canadian OH &S regulations, recognizing deficiencies in our safety management systems, and saving countless man hours by only submitting our information once, instead of numerous times for each client. Being a part of ISNetworld also allows us to showcase our company, and prove to our Owner Clients that we are dedicated to our workers safety by showing our commitment to improving any area that may be lacking. With over 19,000 contractors and suppliers, ISNetworld also brings a sigh of relief in knowing that companies working alongside ours are also held accountable on their safety management system. More importantly the companies that are proving their commitment are continuing to work for our owner clients. This ensures that we can all come together to reach a target zero.

Since subscribing to ISNetworld, I must say that the representatives we've spoken with, and customer service we've dealt with is impeccable, and the amount of training and help available has no doubt helped our company in succeeding with this program. It has been a pleasure working with ISNetworld.

If there is anything else I can help you with or provide some insight on, please feel free to contact me.

Sincerely,

Shyla Hanna
