

October 2011

**Respected Industry Colleagues:**

**American Vibracore Services (AVS)** is a leader in the offshore / onshore geotechnical drilling, vibracoring and marine support services industry. We have established a reputation of excellent safety, superior service, trustworthy business practices and strict attention to detail.

AVS is a proud member of ISNetworld. We find ISNetworld valuable because of its comprehensive system to log our employee certification records and track our safety procedures for our extensive vibracore equipment, including our 85 foot research vessel-the **M/V Thunderforce**. Quality control is critical to operating a safe and efficient world class company. With the controls that ISN has in place, we are able to more clearly manage and preserve our high standards. Being a part of the ISNetworld community allows AVS to be visible to all top industry companies that value safety and professionalism.

In addition, AVS has found the ISN Customer Service Team to have a strong support system for their customers. The personnel are all very knowledgeable and are always available to help with questions about new rules, regulations and ISN website support.

We believe that through our ISNetworld subscription, AVS will be able to demonstrate commitment to the health and safety of our employees and the delicate environments that we operate in, while continuing to deliver excellence on all projects we work on.

Please visit AVS at [www.americanvibracore.com](http://www.americanvibracore.com).

Sincerely,

Fred Kaub  
CEO  
American Vibracore Services, Inc.
