Apache Canada Implements ISNetworld Rollout

Dallas, TX, September 12, 2006 – ISN Software Corporation (ISN) announced today that Apache Canada Ltd. (Apache) has selected ISN and ISNetworld to assist it in improving its contractor management process. Apache contractors have been notified and the enrollment process has begun.

Joe Eastin, Executive Vice President of ISN, said, “Apache’s exploration and development activity in the Canadian region spans the Provinces of Alberta, British Columbia, Saskatchewan and the Northwest Territories. Apache holds over 4.8 million net acres in Canada. In 2005, Apache participated in 1,674 gross wells and has emerged as the nation’s largest producer of coalbed methane. We are excited to be working with Apache and the contractor community that it depends upon.”

Neil Merchant, Apache’s Canadian Region Manager, EH&S, said, "We were introduced to ISN both in Canada and in the US in 2005. Over the past 12 months, we have carefully examined our options including in-house software development and other third-party alternatives. During our process, we consulted with other producers and met several of ISN’s current producer customers to get their feedback. Part of our consideration included the fact that we are a global company and need a global safety and procurement solution. ISN and ISNetworld best meet the needs of our company and our contractors.”

ISN Software Corporation, through its flagship ISNetworld product, automates the relationship between contractors and their owner/operator customers in North America’s most capital-intensive industrial sectors. ISNetworld utilizes third party data wherever possible to create an added level of compliance record management and reporting integrity. For more information, visit www.isnsoftware.com.
