ISNetworld Expands its RAVS Offerings to Include Offshore Subpart O Program Reviews

Dallas, Texas, February 4, 2009 - ISNetworld announced today that it has continued to expand the scope of its safety program review offerings to include Subpart O of the U.S. Minerals Management Service Well Control and Production Safety Training regulations. Minerals Management Service (MMS) regulations are applicable to oil and gas operations in the Outer Continental Shelf (OCS) of the United States, and Subpart O requires that training programs meet specific MMS guidelines.

“Offering our Owner Clients in the offshore industry the opportunity to review contractor written programs against Subpart O requirements will bring further standardization and efficiency to the industry” commented Dag Yemenu, Director of RAVS. ISNetworld’s Review and Verification Services (RAVS) currently utilize over 500 proprietary safety and health review protocols to assess conformance with minimum health and safety program requirements across the U.S., Canada, and Australia.

Dag Yemenu, ISNetworld Director of Safety for RAVS, added, “The addition of Subpart O program review strengthens our offering to Owner Clients engaged in offshore petrochemical industry. Our current Owner Clients had a lot of say in the development of this protocol and we are committed to continue offering the industry with efficient solution to help improve safety and contractor compliance.”

“Owner Clients operating in the Gulf of Mexico are excited to add Subpart O program review to the list of items ISNetworld reviews on their behalf. Utilizing one centralized database to track HS&E performance, supply chain requirements, training, audits and regulatory compliance is paramount in their efforts to pre-qualify and manage contractors,” stated Melanie Gordon, Offshore Team Lead.

About ISNetworld

ISNetworld provides an online Contractor management database designed to meet internal and governmental health, safety, and environmental requirements. ISNetworld Review and Verification Services (RAVS) validate contractor information. ISNetworld has standardized health and safety communication and provides a method for subscribers to house documents, measure, compare and benchmark health and safety statistics, and provides a method of evaluation and communication between companies and their contractors. Contractors also use the system to manage training and record keeping requirements. For more information, visit www.isnetworld.com.
