ISNetworld Introduces New Equipment and Technology

Enhancements speed up and simplify process for users

DALLAS, TX (April 1, 2009) – ISNetworld (ISN) today announced a million dollar system-wide upgrade to improve the speed and performance of ISNetworld for all customers. ISNetworld now has twelve times more memory and three times more processing capacity. In addition, these upgrades increased data storage capacity to more than three terabytes.

“ISNetworld has experienced record traffic and user activity in the last 12 months. Traffic and user activity are up 80 percent and 47 percent, respectively,” said Saks Ishrat, vice president of Product Development. “These upgrades should improve users’ experience for the foreseeable future.”

Additionally, on April 1, 2009, ISN introduced its new Management System Questionnaire (MSQ), replacing the existing SCQ-V questionnaire. The MSQ is better organized for contractors and aligned with the OHSAS 18001 international occupational health and safety management system specification. The MSQ is also tailored for country-specific requirements by Owner Client.

Julie Polk, director of QAQC, added, “A number of our clients have adopted a Management Systems approach in their operations. By reorganizing our questionnaire, we not only match their systems and this recognized industry standard, but also make the process more efficient and simple for all. We are pleased to introduce the MSQ and its enhancements to all of our clients.”

About ISNetworld

ISNetworld provides an online contractor/supplier management database designed to meet internal and governmental health, safety, and environmental requirements. ISNetworld Review and Verification Services (RAVS) validate contractor/supplier information. ISNetworld communicates health and safety standards and provides a method for subscribers to house documents, measure, compare, and benchmark health and safety statistics, and provides a method of evaluation and communication between companies and their contractors. Contractor/Suppliers also use the system to manage training and recording keeping requirements. For more information, visit www.isnetworld.com.
