To Whom It May Concern:

ASI Piping LLC, a Repronstrickland company, has been a member of ISNetworld since 2007.

Our long term perspective and working relationship with ISNetworld is most positive.

Each Owner Client we work with, for, and those in the future, seem to have their own specific method of pre-qualification criteria, vendor history, quality-control, insurance, and safety requirements; but, all Owner clients require the same basic information requested in different formats.

ISNetworld has presented to both Owner Clients and contractors/suppliers a format that covers the essential elements of safety, quality control, vendor history, and insurance information, while also simplifying the pre-qualification process.

ASI Piping, LLC is able to complete the individual Owner Client requirements in a clear format, and have each submission reviewed to ensure that we are meeting our Owner Client requirements. ISNetworld has provided a central database for data submission, as well as a way for existing Owner Clients and potential Owner Clients to view our health and safety information with the possibility of new business opportunities. ISNetworld's 24 hour email system alerts ASI Piping of new data requirements, Users Group/Help Desk meetings, and our current standing with our Owner Clients.

ISNetworld's Users Group Meetings and Help Desks have also proven to be helpful to ASI Piping. These meetings allow vendors like ASI Piping to hear from the Owner Clients directly. The Owner Clients share how they utilize ISNetworld, and more importantly, how they utilize their vendor base when looking for prospective work. Also, the information updates requested from our Owner Clients do not involve mounds of paperwork, emails, or forms. All pertinent data is readily available to our Owner Clients through ISNetworld, and the information remains confidential and succinct.

Regards,

Clyde Williamson
President and General Manager
